

SoilVeg

“Improving soil conservation and resource use in organic cropping systems for vegetable production through introduction and management of Agro-ecological Service Crops (ASC)”

Final Meeting

**Palazzetto Mattei, Italian Geographical Society,
Via della Navicella, 12 – Rome (Italy)**

23rd of May 2018, 9:00 – 12:30

SoilVeg is an innovative European research project tackling the implementation of no tillage systems in organically managed vegetable production. Its overall goal is to improve soil conservation and resource use through the introduction and smart management of Agro-ecological Service Crops (ASC).

The SoilVeg Final Meeting is aimed at sharing with the scientific community, as well as a wider technical audience the results achieved in the projects.

Agenda

09:00	Welcome
09:20	SoilVeg video & introduction
09:30	Yield reduction and stability issues in no-till vegetable systems
10:00	Influence of ASCs and no-till on energy use and climate change mitigation
10:30	Break
10:45	Role of ASCs and no-till in agroecosystem biodiversity protection
11:15	Effects of ASCs and no-till on soil fertility preservation
11:45	Discussion & Conclusions
12:30	Lunch
